

SELENIUM AUTOMATION ASSIGNMENT

Assignment 4 – JavaScript Alerts and Confirms

Execution Report • Selenium with Python • JavaScript Dialog Handling

Item	Details
Assignment	4 – JavaScript Alerts and Confirms
Application Under Test	The Internet – JavaScript Alerts
Automation Tool	Selenium WebDriver
Programming Language	Python
Browser	Google Chrome
Alert Handling	Accept JavaScript Alert
Confirm Handling	Dismiss JavaScript Confirm
Prompt Handling	Enter text and accept Prompt
Prompt Input	Selenium Assignment 4
Execution Status	PASSED

This report documents the implementation and execution of JavaScript alert, confirm, and prompt handling using Selenium WebDriver. It includes the test approach, source code, validation results, and execution screenshots.

1. Objective

The objective of this assignment is to demonstrate how Selenium WebDriver handles JavaScript dialog boxes. The test triggers a JavaScript Alert, a Confirm dialog, and a Prompt dialog, then performs the required actions on each dialog.

The Alert is accepted, the Confirm is dismissed, and text is entered into the Prompt before the Prompt is accepted. The final page result is validated using an assertion.

2. Assignment Requirements

No.	Requirement	Implementation
1	Trigger JavaScript Alert	Click 'Click for JS Alert'
2	Accept Alert	<code>alert.accept()</code>
3	Trigger Confirm Box	Click 'Click for JS Confirm'
4	Dismiss Confirm	<code>confirm.dismiss()</code>
5	Trigger Prompt Box	Click 'Click for JS Prompt'
6	Enter text into Prompt	<code>prompt.send_keys('Selenium Assignment 4')</code>
7	Submit Prompt	<code>prompt.accept()</code>
8	Validate result	Assert entered text appears in result

3. Test Environment

Component	Configuration
Operating System	Windows
IDE	Visual Studio Code
Language	Python 3.14 (64-bit)
Automation Framework	Selenium WebDriver
Browser	Google Chrome
Test Page	The Internet – JavaScript Alerts

4. Alert Handling Approach

Step 1: Launch Chrome and open the JavaScript Alerts practice page.

Step 2: Click the JavaScript Alert button and wait for the alert to appear.

Step 3: Read the alert text and accept the alert using `accept()`.

Step 4: Click the JavaScript Confirm button and dismiss the confirm dialog using `dismiss()`.

Step 5: Click the JavaScript Prompt button and wait for the prompt to appear.

Step 6: Enter the text 'Selenium Assignment 4' into the prompt.

Step 7: Accept the prompt to submit the entered value.

Step 8: Read the resulting page text and validate the entered value using an assertion.

5. JavaScript Dialog Methods Used

Dialog	Selenium Method	Action
Alert	alert.accept()	Accept / OK
Confirm	confirm.dismiss()	Dismiss / Cancel
Prompt	prompt.send_keys(...)	Enter text
Prompt	prompt.accept()	Submit / OK

6. Key Implementation Code

```
# JavaScript Alert
alert = wait.until(EC.alert_is_present())
print("Alert Text:", alert.text)
alert.accept()

# JavaScript Confirm
confirm = wait.until(EC.alert_is_present())
print("Confirm Text:", confirm.text)
confirm.dismiss()

# JavaScript Prompt
prompt = wait.until(EC.alert_is_present())
print("Prompt Text:", prompt.text)
prompt.send_keys("Selenium Assignment 4")
prompt.accept()

# Validate final result
result = driver.find_element(By.ID, "result")
assert "Selenium Assignment 4" in result.text
```

7. Complete Test Script

```
from selenium import webdriver
from selenium.webdriver.common.by import By
from selenium.webdriver.support.ui import WebDriverWait
from selenium.webdriver.support import expected_conditions as EC

# Launch Chrome
driver = webdriver.Chrome()

# Open JavaScript Alerts page
driver.get("https://the-internet.herokuapp.com/javascript_alerts")
driver.maximize_window()

wait = WebDriverWait(driver, 10)

# JavaScript Alert
alert_button = wait.until(
    EC.element_to_be_clickable(
        (By.XPATH, "//button[text()='Click for JS Alert']")
    )
)
alert_button.click()

alert = wait.until(EC.alert_is_present())
print("Alert Text:", alert.text)
alert.accept()
print("JavaScript Alert: ACCEPTED")

# JavaScript Confirm
confirm_button = wait.until(
    EC.element_to_be_clickable(
        (By.XPATH, "//button[text()='Click for JS Confirm']")
    )
)
confirm_button.click()

confirm = wait.until(EC.alert_is_present())
print("Confirm Text:", confirm.text)
confirm.dismiss()
print("JavaScript Confirm: DISMISSED")

# JavaScript Prompt
prompt_button = wait.until(
    EC.element_to_be_clickable(
        (By.XPATH, "//button[text()='Click for JS Prompt']")
    )
)
prompt_button.click()

prompt = wait.until(EC.alert_is_present())
print("Prompt Text:", prompt.text)
prompt.send_keys("Selenium Assignment 4")
prompt.accept()
print("Prompt Text Submitted: Selenium Assignment 4")

# Validation
result = driver.find_element(By.ID, "result")
print("Result:", result.text)

assert "Selenium Assignment 4" in result.text

print("Alert validation: PASSED")
print("Confirm validation: PASSED")
print("Prompt validation: PASSED")
print("Assignment 4 Passed!")

input("Press ENTER to close the browser...")

driver.quit()
```

8. Execution Evidence

The submitted screenshots were reviewed and show the automated JavaScript dialog handling process and successful final validation. One screenshot captures the Prompt with the entered text, another shows the resulting page value, and the terminal confirms that all three validation stages passed.

Figure 1 – JavaScript Prompt displayed with 'Selenium Assignment 4' entered.

Figure 2 – Final browser result showing the submitted prompt value.

The screenshot shows the Visual Studio Code interface with a Selenium project. The Explorer sidebar on the left lists files: assignment1.py, assignment2.py, assignment3.py, and assignment4.py. The main editor displays assignment4.py with the following code:

```
106 print("Result:", result.text)
107
108 # Verify prompt result
109 assert "Selenium Assignment 4" in result.text
110
111 print("Alert validation: PASSED")
112 print("Confirm validation: PASSED")
113 print("Prompt validation: PASSED")
114 print("Assignment 4 Passed!")
115
```

The Terminal at the bottom shows the execution output:

```
PS E:\Selenium project> & C:\Users\sayan\AppData\Local\Programs\Python\Python314\python.exe "e:/Selenium project/assignment4.py"
Alert Text: I am a JS Alert
JavaScript Alert: ACCEPTED
Confirm Text: I am a JS Confirm
JavaScript Confirm: DISMISSED
Prompt Text: I am a JS prompt
Prompt Text Submitted: Selenium Assignment 4
Result: You entered: Selenium Assignment 4
Alert validation: PASSED
Confirm validation: PASSED
Prompt validation: PASSED
Assignment 4 Passed!
Press ENTER to close the browser...
PS E:\Selenium project>
```

On the right, the Chat sidebar shows a session for 'assignment4.py' with a prompt 'Describe what to build' and buttons for 'Agent', 'Auto', and 'AI Code Chat'.

Figure 3 – VS Code terminal showing Alert, Confirm, and Prompt validations passed.

9. Test Result

Validation Point	Expected	Observed	Status
JavaScript Alert	Accepted	ACCEPTED	PASS
JavaScript Confirm	Dismissed	DISMISSED	PASS
JavaScript Prompt	Text entered	Selenium Assignment 4	PASS
Prompt submission	Accepted	Submitted successfully	PASS
Result validation	Entered text displayed	You entered: Selenium Assignment 4	PASS
Overall execution	All checks pass	Assignment 4 Passed!	PASS

10. Conclusion

The JavaScript Alerts and Confirms assignment was successfully completed using Selenium WebDriver with Python. The test handled all three required JavaScript dialog types: the Alert was accepted, the Confirm was dismissed, and the Prompt received the required text before being accepted.

The final page result confirmed that 'Selenium Assignment 4' was submitted successfully. The terminal execution also confirms that Alert, Confirm, and Prompt validation all passed.

Final Status: PASSED
